

# Worried about a parent living alone?

## Talk to TADWA.

InteliCare is an innovative solution enabling older people to live safely in their own homes for longer.

Using a hub and wireless sensors, InteliCare builds a profile for each home and can alert family or other caregivers if something is out of the ordinary.

For example, InteliCare understands normal get up time, meal preparation and sleep patterns. Understanding these routine activities enables InteliCare to detect potential issues and send notifications and alerts to family members or carers, allowing them to check-in if needed.

The InteliCare App keeps everyone informed of any events and lets everyone see who is responding to notifications.

InteliCare can be installed quickly and easily in any home with no modifications or electrical works.

TADWA is an authorised Intelicare installer. To find out more, talk to TADWA. **1300 663 243**

### How does it work?

1. The home is fitted out with unobtrusive smart home sensors and the InteliHub smarthome controller.
2. The InteliCare system builds an understanding of the home routine.
3. If an issue is detected, the app will send a notification or alert.
4. Family can see if all is OK via the InteliCare app.
