Features for Seniors

- Two large, in-built speakers. Much louder than tablets or laptops.
- LARGE 15-inch (38 cm) screen, easy to see from anywhere in the room.
- HUGE one-touch Call buttons. Incredibly simple.
- Blocks unknown callers. No telemarketers or fraudsters!
- No numbers to remember. Each Call button first calls your contact's mobile / tablet / computer face-to-face, and then tries backup home / office landlines in turn. All with one touch.
- Auto-answer option for trusted carers.

The Konnekt Videophone has been designed specifically for seniors, to enable face-to-face contact with family and friends through the simplest interface possible: one touch to dial.

It requires no computer skills whatsoever. Using a finger, a prosthetic, or just about any object, just tap the name you want to call on the 15 inch screen, and the Videophone commences a Skype call. Incoming calls are equally simple, and can be automatically answered for authorised users.

Buttons and text size, colour, language, volume, and many other preferences are adjustable, enabling us to tailor the Videophone for each user.

During a call, the user can sit close by, or a few metres away and talk in a normal voice, thanks to a highly sensitive auto-adjusting microphone, very loud speakers, and other carefully selected components. Several mounting options are available.
