

Considering an emergency alert system?

Talk to TADWA.

- Automatic fall detection and emergency activation
- Yellow SOS button for emergency alerts
- Automatic hands-free speaker phone
- GPS locator
- Geo Fence boundary features
- Easy, cable-free charging cradle
- No expensive monthly plans

The 4G Medi Alert Pendant is now available at TADWA. This convenient device is suitable for family members living with Dementia or who are at risk of falling.

When help is needed, a press of the SOS button on this small and light device will send a text message to your emergency contacts and also rings so they know you need help.

For more information or to arrange a purchase, contact TADWA on **1300 663 243**.

What is it?

An unmonitored pendant alarm is a device that uses the mobile network to send out SMS help messages and make phone calls to your emergency contacts.

Situations where a pendant alarm could be useful:

- The pendant wearer is under duress
- The pendant wearer has a fall and can't get to a phone
- The pendant wearer is disorientated, lost or at risk

Features:

- Clear easy to read LCD screen
- Large easy to use buttons
- When the SOS button is pressed the pendant sends an emergency message to up to 8 emergency contacts
- Emergency contacts receive Google Maps link showing the location of the pendant via SMS
- Pendant can receive incoming phone calls from any mobile or landline.
- Pendant can be located at any time by emergency contacts via SMS
- Easy to setup using SMS text message commands
- Splash resistant*
- Falls detection feature
- Can be configured to alarm when pendant enters or leaves pre-set area
- Includes pendant, USB cable, lanyard, docking station and manual
- Requires pre-paid SIM card (included in TADWA package) - no lock-in contract
- Uses Telstra wholesale network
- No ongoing costs (other than SMS costs)

Advantages of Unmonitored Pendant Alarms:

- No ongoing monitoring fees
- Product is purchased and owned outright
- Calls go to family, neighbours and/or friends who are often close by
- A pendant wearer may feel more comfortable activating the alarm when they know it will call someone they know (there is often reluctance when the call will go to 000).
- The pendant can be easily programmed to any phone number and changed if required e.g. if a family member goes on holiday

Fall Detection

The device has a fall sensor. If it detects a fall the pendant automatically activates the SOS texts and call list.

*The IP rating on the FD model means that the unit is not submersible. It is not recommended to be worn in the shower. We recommend hanging the unit from a hook low enough to reach if a fall occurs while showering or wear the unit with a zip lock bag.
